

## Numbering Day Passes

There is a script included in the Pagemaker file that numbers the four passes in the file and outputs them to the printer. After that it resets the numbers and incrementally numbers and prints the next sheet.

You have to be in the Pagemaker layout view to start the script.

In the Pagemaker file go to the menu  
Window -> Plug-in Palettes -> Show Scripts

Choose ankes-> freepass number  
Double-click to run.

You have to define a printerstyle defining a landscape and double-sided print format.(In the script below it's called "senglex").

y defines the number to start with, e.g. the number on the first pass.  
z defines the number of loops you need to print all required passes.

Enjoy!

```
printerstyle "senglex"  
y=200  
  
loop z=1,6  
  
editstory  
  
loop x=1,4  
  
if y < 10  
string[x]="#2001-00"+Str(y)  
elseif y < 100  
string[x]="#2001-0"+Str(y)  
else  
string[x]="#2001-"+Str(y)  
endif  
  
change "#xy", string[x], allstories, wrap, anycase, wholeword,  
useattributes  
y=y+1  
endloop  
  
editlayout  
  
print
```
